Hi Olivia,

I don't have that as I will need to get the area prepared after removal and determine what will work in that area. I have 2 evergreen trees in pots that I have ready to plant when the time is right.

For the mitigation (replacement trees)? I didn't recall any proposed Replacement trees in the arborist report.

Hi Olivia,

The amount and size of the trees should have been in the original report from R & R Tree Service. Please let me know if you don't have that information.

Thank you for the map. Mark said he was updating his report.

I also need a specific amount and size of trees to be replaced.

RE: Tree Removal Permit - Incomplete Letter

Hi Olivia,

I am attaching a site map.

We will be grinding the stumps and can replace the trees with new trees if mandatory, however, it is a very shaded and overgrown area from surrounding trees behind us so there will be no direct sun to that area. By the time the area will be cleared off, I feel the best time to plant other trees if needed would be early next spring for their best chance of surviving.

Thank you for considering our proposal for removal for both the 3 trees and the single tree in the NE corner. The inside damage to our ceilings and walls continues to get worse as the roots grow. As I said before, we are only wanting to remove these trees because of the damage they are causing to our house and the neighbor's house.

Our engineer has told us that our inside damage is definitely being caused by the tree roots because all 4 of these trees are very close to our houses with wide spreading roots.

We have obtained proposals for the tree removal and are hoping you see the need to remove these trees before there is further damage to our home.

Thanks,

Pam
