

## ARBORIST REPORT

*Located at:* 1457 Goldcrest Ave NW, Salem

*Prepared for:* Christopher Easton

*By:* Tim Jones, ISA Certified Arborist #PN-6819A, TRAQ Certified

*Evaluation performed:* November 5, 2024

## DESCRIPTION

### Hazardous Tree Removal pursuant to SRC 808.030(d)(1).

Our company was contacted by Christopher Easton, property owner of 1457 Goldcrest Ave NW in Salem, regarding the hazardous condition of four poplar trees located within the riparian zone. The four poplar trees are located in the backyard of the home. *(Tree locations are circled in white on following page)*

The four poplar trees measure at approximately 30", 28", 26" and 31" in diameter and require a permit from the city of Salem to remove as the trees appear to be within 50' of a riparian zone.

I visited the property on November 5, 2024, to assess the health of the poplar trees, take measurements and pictures, and note observations.

All four trees are dead.

In my opinion, the removal is necessary for safety of the nearby homes, property and people and these hazards cannot be alleviated by treatment or pruning.
