Thank you so much Kyle for your quick response and the call this morning.

I will get the Trash enclosure updated to match the requirements stated in the worksheet above.

Hi Kyle,

I am reaching out to you once again asking for your guidance on the site plan. In this site plan option, I have rotated the Trash enclosure bins and made them face each other in an effort to have a smaller Trash enclosure. Is this acceptable to Pacific Sanitation? I have used the smallest size of the containers since the building is 1738 SF and my understanding is we wouldn't generate so much trash or recycled material. For trash, I have shown a 1-yard container and for recycling, I have shown a 90 gallon container. Please provide us with your feedback.

This looks like it will work fine for us.

Hi Ryan!

We reached out to Pacific Sanitation again this morning since Rahim needed more space for stormwater and also the Trash enclosure is way too big for a small building like ours. Kyle from Pacific Sanitation gave us a green light saying that containers facing each other should work for him. We have also reduced the size of the containers substantially. We were wondering if you were onboard with us on this. Please see the attached site plan sent to Kyle for his approval
