INTRODUCTION

This study evaluates the transportation impacts associated with the proposed PacTrust industrial development located on the southern corner of the Aumsville Highway/ Truax Drive intersection in Salem, Oregon. The proposed development is located within the Mill Creek Corporate Center that was previously Master Planned by the State of Oregon and City of Salem.¹ The estimated year of completion for this project is 2023.

The purpose of this transportation impact analysis is to identify potential mitigation measures needed to offset impacts that the proposed development may have on the nearby transportation network. The impact analysis is focused on three study intersections and the three site driveways. The intersections are shown in Figure 1.

- Aumsville Highway/ Kuebler Boulevard/ Lancaster Drive/ Cordon Road
- Aumsville Highway/ Truax Drive
- Kuebler Boulevard/ Mill Creek Drive
- Truax Drive/ (3) Site Accesses

Table 1 lists important characteristics of the study area and proposed project.

TABLE 1: KEY STUDY AREA AND PROPOSED DEVELOPMENT CHARACTERISTICS

CHARACTERISTICS	INFORMATION
STUDY AREA	
NUMBER OF STUDY INTERSECTIONS	Six (including three site accesses)
ANALYSIS PERIOD	Weekday AM and PM Peak Hours (Peak hour is one hour between 7-9 AM and 4-6 PM)
PROJECT SITE	
EXISTING LAND USE	Vacant
PROPOSED DEVELOPMENT	472,125 square foot total of industrial buildings
PROPOSED PROJECT ACCESS(ES)	Three full driveways on Truax Drive

¹ Salem Region Employment Center, Proposed Master Plan and Development Strategy, State of Oregon and City of Salem, September 9, 2004.

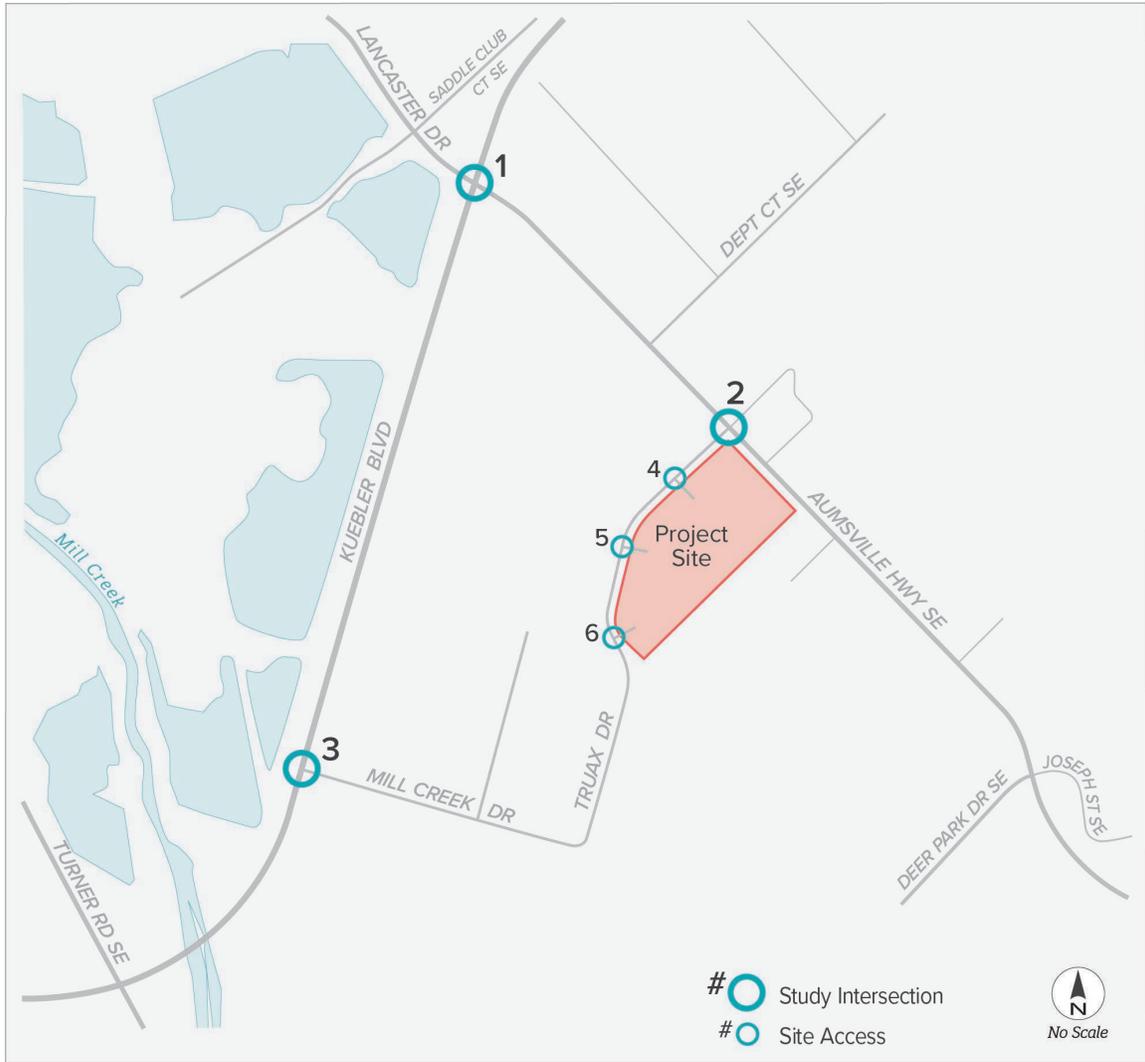

FIGURE 1: STUDY AREA

EXISTING CONDITIONS

This chapter provides documentation of existing study area conditions, including the study area roadway network, pedestrian and bicycle facilities, and existing traffic volumes and operations.

STUDY AREA ROADWAY NETWORK

The project site is located in the southeast region of Salem, Oregon. Key roadways in the study area are summarized in Table 2 along with their existing roadway characteristics. The functional classifications of the roadways are found in the Salem Transportation System Plan.²

TABLE 2: STUDY AREA ROADWAY CHARACTERISTICS (WITHIN THE VICINITY OF THE PROJECT)

ROADWAY	FUNCTIONAL CLASSIFICATION	NO. OF LANES	POSTED SPEED	SIDEWALK	BIKE FACILITIES	ON-STREET PARKING
AUMSVILLE HIGHWAY	Minor Arterial	3	45 mph	Yes	Yes	None
KUEBLER BOULEVARD	Parkway	2	55 mph	None	Yes	None
LANCASTER DRIVE	Major Arterial	2	40 mph	Yes	Yes	None
CORDON ROAD	Parkway	2	55 mph	None	Yes	None
MILL CREEK DRIVE	Local	2	35 mph	Yes	Yes	None
TRUAX DRIVE	Local	2	None	Yes	Yes	None

PEDESTRIAN AND BICYCLE FACILITIES

Aumsville Highway has sidewalks between Kuebler Boulevard and the Oregon Department of Public Safety building, and Lancaster Drive has sidewalks between Kuebler Boulevard and Saddle Club Court. There are no pedestrian facilities on Kuebler Boulevard or Cordon Road near the project area. The internal local roads of Mill Creek Drive and Truax Drive have sidewalks with a landscape buffer. Bicycle lanes are present on all study roadways.

PUBLIC TRANSIT

Cherriots operates multiple fixed routes that serve Salem and Keizer. Route 11 (Lancaster/Verda) provides service between the Keizer Transit Center in Keizer and the Marion County Correctional Facility on Aumsville Highway. There are bus stops just northwest and southeast of the Aumsville Highway/ Truax Drive intersection. The route has headways of approximately 15 minutes between the hours of 6:00am and 9:00pm on weekdays and headways of approximately 30 minutes between the hours of 6:30am and 8:30pm on Saturdays.

² Salem Transportation System Plan, City of Salem, Amended January 2020.

SAFETY ANALYSIS

A safety analysis for the three public study intersections was conducted based on the most recent five years (2015 - 2019) of crash data available. There were 18 crashes at the Aumsville Highway/ Kuebler Boulevard/ Lancaster Drive/ Cordon Road intersection, two crashes at the Kuebler Boulevard/ Mill Creek Drive intersection, and no reported crashes at the Aumsville Highway/ Truax Drive intersection. No crashes involving pedestrians or bicyclists were reported at any of the intersections. There were also no reported crashes along Truax Drive near the proposed development's frontage due to the road being constructed in 2020.

TABLE 3: INTERSECTION CRASH DATA

INTERSECTION	FATAL	SERIOUS INJURY	MINOR INJURY	POSSIBLE INJURY	PROPERTY DAMAGE ONLY	TOTAL
AUMSVILLE HWY/ KUEBLER BLVD/ LANCASTER DR/ CORDON RD	1	1	3	7	6	18
KUEBLER BLVD/ MILL CREEK DR	0	0	1	1	0	2
AUMSVILLE HWY/ TRUAX DR	0	0	0	0	0	0

One fatal crash occurred at the Aumsville Highway/ Kuebler Boulevard/ Lancaster Drive/ Cordon Road intersection. It was a head-on crash involving a vehicle traveling northeast on Kuebler Boulevard that hit another vehicle head-on that was waiting to turn left off of Cordon Road onto Aumsville Highway. It was a dark and rainy evening. The primary contributing factor was a driver under the influence of drugs and alcohol.

One serious injury crash occurred at the Aumsville Highway/ Kuebler Boulevard/ Lancaster Drive/ Cordon Road intersection. It was an angle crash involving a vehicle traveling northeast on Kuebler Boulevard that disregarded the signal and hit a vehicle traveling southeast on Lancaster Drive. It was a dark and rainy evening. No contributing factors were reported that caused the driver to disregard the signal.

The Safety Priority Index System (SPIS) is a ranking system developed by ODOT to identify potential safety problems on state highways. SPIS scores are developed based upon crash frequency, crash severity, and traffic volume for a 0.10 mile or variable length segment along the state highway over a rolling three-year window. A prioritized list of the top 15% of statewide SPIS sites is created for each region, and the top 5% are investigated by the five Region Traffic managers' offices.

The Aumsville Highway/ Kuebler Boulevard/ Lancaster Drive/ Cordon Road intersection was identified as a top 10% SPIS location per SPIS 2019. However, in 2019, safety improvements were constructed that included retroreflective backplates on the signal heads at the intersection. This safety improvement has likely reduced the occurrence of crashes at this intersection. There are no additional safety recommendations for this intersection.

EXISTING TRAFFIC VOLUMES

Weekday AM and PM peak hour turning movement counts (7:00-9:00 am and 4:00-6:00 pm) were collected at the three study intersections in December 2021. See the appendix for the volume data. Volumes for the site access driveways were determined based on volumes from the adjacent Aumsville Highway/ Truax Drive intersection. The 2021 existing traffic volumes are shown in Figure 2.

In July 2021, ODOT released their final COVID Monitoring Traffic Report, which indicated that statewide traffic levels were approximately back to “pre-COVID” levels (plus or minus 5%). Other local agencies in the area have anecdotally noted similar observations on the local street system as schools have returned to in-person learning this fall. Therefore, no COVID adjustment was applied to the traffic counts. Additionally, with the adjacent Amazon Distribution Center, the December counts are likely higher than other months due to the increase in holiday truck deliveries.

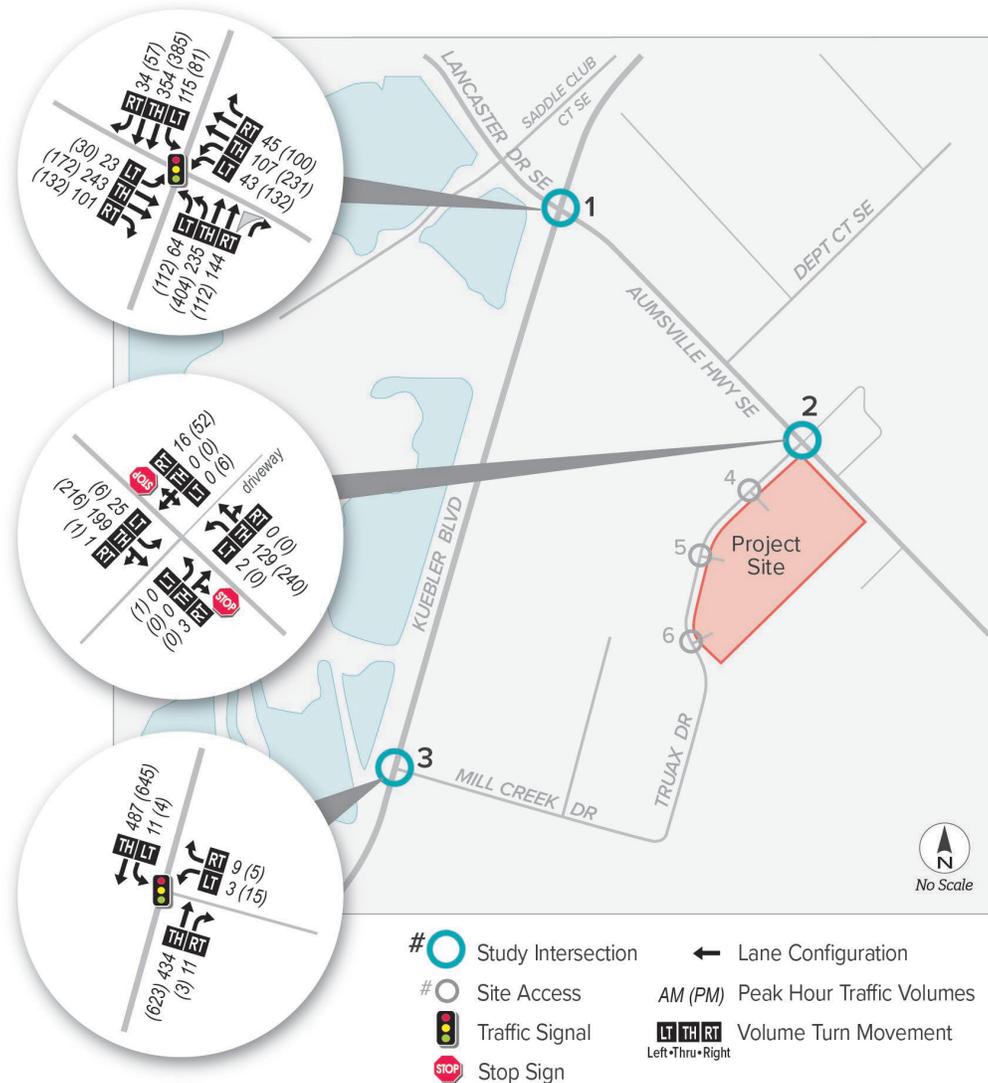

FIGURE 2: EXISTING AM AND PM PEAK HOUR VOLUMES (2021)

INTERSECTION PERFORMANCE MEASURES

Level of service (LOS) ratings and volume-to-capacity (v/c) ratios are two commonly used performance measures that provide a good picture of intersection operations.

- **Level of Service (LOS):** A “report card” rating (A through F) based on the average delay experienced by vehicles at the intersection. LOS A, B, and C indicate conditions where traffic moves without significant delays over periods of peak hour travel demand. LOS D and E are progressively worse operating conditions. LOS F represents conditions where average vehicle delay has become excessive and demand has exceeded capacity.
- **Volume-to-capacity (v/c) ratio:** A decimal representation (typically between 0.00 and 1.00) of the proportion of capacity that is being used at a turn movement, approach leg, or intersection. It is determined by dividing the peak hour traffic volume by the hourly capacity of a given intersection or movement. A lower ratio indicates smooth operations and minimal delays. As the ratio approaches 1.00, congestion increases, and performance is reduced. If the ratio is greater than 1.00, the turn movement, approach leg, or intersection is oversaturated and usually results in excessive queues and long delays.

REQUIRED OPERATING STANDARDS

The study intersections are located within the City of Salem’s jurisdiction. Per the City of Salem Administrative Rules, the maximum operation standards during the morning and evening peak hours for intersections is LOS E and a v/c ratio of 0.90 for signalized intersections and LOS E for unsignalized intersections.³

EXISTING OPERATING CONDITIONS

Existing traffic operations at the study intersections were determined for the AM and PM peak hours based on the Highway Capacity Manual (HCM) 6th Edition methodology for signalized and unsignalized intersections.⁴ The results were then compared with the City of Salem’s minimum operating standards. Table 4 lists the estimated v/c ratio, delay, and LOS of each study intersection. The HCM reports are provided in the appendix.

³ Division 6, Public Works Design Standards, City of Salem Administrative Rules, January 2016.

⁴ Highway Capacity Manual, 6th Edition, Transportation Research Board, 2016.

TABLE 4: EXISTING INTERSECTION OPERATIONS (2021)

INTERSECTION	OPERATING STANDARD	AM PEAK HOUR			PM PEAK HOUR		
		V/C RATIO	DELAY (SECS)	LOS	V/C RATIO	DELAY (SECS)	LOS
SIGNALIZED							
AUMSVILLE HWY/ KUEBLER BLVD/ LANCASTER DR/ CORDON RD	LOS E v/c ≤ 0.90	0.30	14.8	B	0.34	15.4	B
KUEBLER BLVD/ MILL CREEK DR	LOS E v/c ≤ 0.90	0.36	3.9	A	0.43	4.5	A
UNSIGNALIZED							
AUMSVILLE HWY/ TRUAX DR	LOS E	0.01	9.4	A/A	0.01	14.7	A/B
TRUAX DR/ SITE ACCESS #1	LOS E	-	-	-	-	-	-
TRUAX DR/ SITE ACCESS #2	LOS E	-	-	-	-	-	-
TRUAX DR/ SITE ACCESS #3	LOS E	-	-	-	-	-	-
SIGNALIZED INTERSECTION: Delay = Average Intersection Delay (secs) v/c = Total Volume-to-Capacity Ratio LOS = Total Level of Service				TWO-WAY STOP CONTROLLED INTERSECTION: Delay = Critical Movement Approach Delay (secs) v/c = Associated Movement Volume-to-Capacity Ratio LOS = Level of Service (Major/Minor Road)			

As shown, the existing intersection operations for all study intersections meet the City’s operating standards.

PROJECT IMPACTS

This section reviews the impacts that the proposed development may have on the transportation system within the study area. This analysis includes the trip generation, trip distribution, and future year traffic volumes and operating conditions for the study intersections under both Background and Build scenarios.

PROPOSED DEVELOPMENT

The proposed development consists of four industrial buildings used for primarily light industrial purposes with some warehousing. The buildings are an estimated 427,125 square feet total and are expected to be completed in 2023. There are three proposed site access driveways along Truax Drive.

ANALYSIS SCENARIOS

Future operating conditions were analyzed at the study intersections for the following future traffic scenarios. The comparison of the following scenarios enables the assessment of project impacts:

- 2023 Background – This scenario represents the expected future traffic conditions of the study area without the project trips from the proposed development but including any in-process trips from nearby approved developments that are not yet occupied.
- 2023 Build – This scenario represents the expected traffic conditions of the study area with the project trips for the proposed development, assuming it is built and fully occupied by 2023.

TRIP GENERATION

Trip generation is the method used to estimate the number of vehicles added to site roadways and the adjacent roadway network by a development during a specified period (i.e., such as the PM peak hour). ITE 11th Edition trip generation data was used to determine the trip generation of the new development.⁵

The ITE land use General Light Industrial (110) was used for all buildings. Table 5 provides the trip generation for the proposed development. As shown, the development is expected to generate approximately 306 total (268 in, 38 out) AM peak hour trips, 165 total (22 in, 143 out) PM peak hour trips, and 1,807 daily trips.

⁵ Trip Generation Manual, 11th Edition, Institute of Transportation Engineers, 2021.

TABLE 5: TRIP GENERATION

BUILDING NUMBER	LAND USE (ITE CODE)	SIZE ^A	AM PEAK TRIPS			PM PEAK TRIPS			DAILY TRIPS
			TOTAL	IN	OUT	TOTAL	IN	OUT	
BLDG. 221	GENERAL LIGHT INDUSTRIAL (110)	200 KSF	140	123	17	66	9	57	802
BLDG. 222	GENERAL LIGHT INDUSTRIAL (110)	72 KSF	53	46	7	32	4	28	321
BLDG. 223	GENERAL LIGHT INDUSTRIAL (110)	72 KSF	53	46	7	32	4	28	321
BLDG. 224	GENERAL LIGHT INDUSTRIAL (110)	83.125 KSF	60	53	7	35	5	30	363
TOTAL		427.125 KSF	306	268	38	165	22	143	1,807

^A KSF= 1,000 square feet.

TRIP DISTRIBUTION

Trip distribution provides an estimate of where project-related trips would be coming from and going to. It is given as percentages at key gateways to the study area and is used to route project trips through the study intersections.

Figure 3 on the following page shows the expected trip distribution and project trip routing for the additional traffic generated by the proposed development. The distribution shows 35% of trips traveling to/from Lancaster Drive in the northwest, 25% of trips traveling to/from Cordon Road in the northeast, 35% of trips traveling to/from Kuebler Boulevard in the southwest, and 5% of trips traveling to/from Aumsville Highway in the southeast. All trips along Kuebler Boulevard use the Mill Creek intersection to access Truax Drive. This trip distribution was estimated using the SKATS travel demand model and the existing traffic patterns in the area.⁶

⁶ 2043 SKATS Travel Demand Model, Select Zone Analysis, Zone 409.

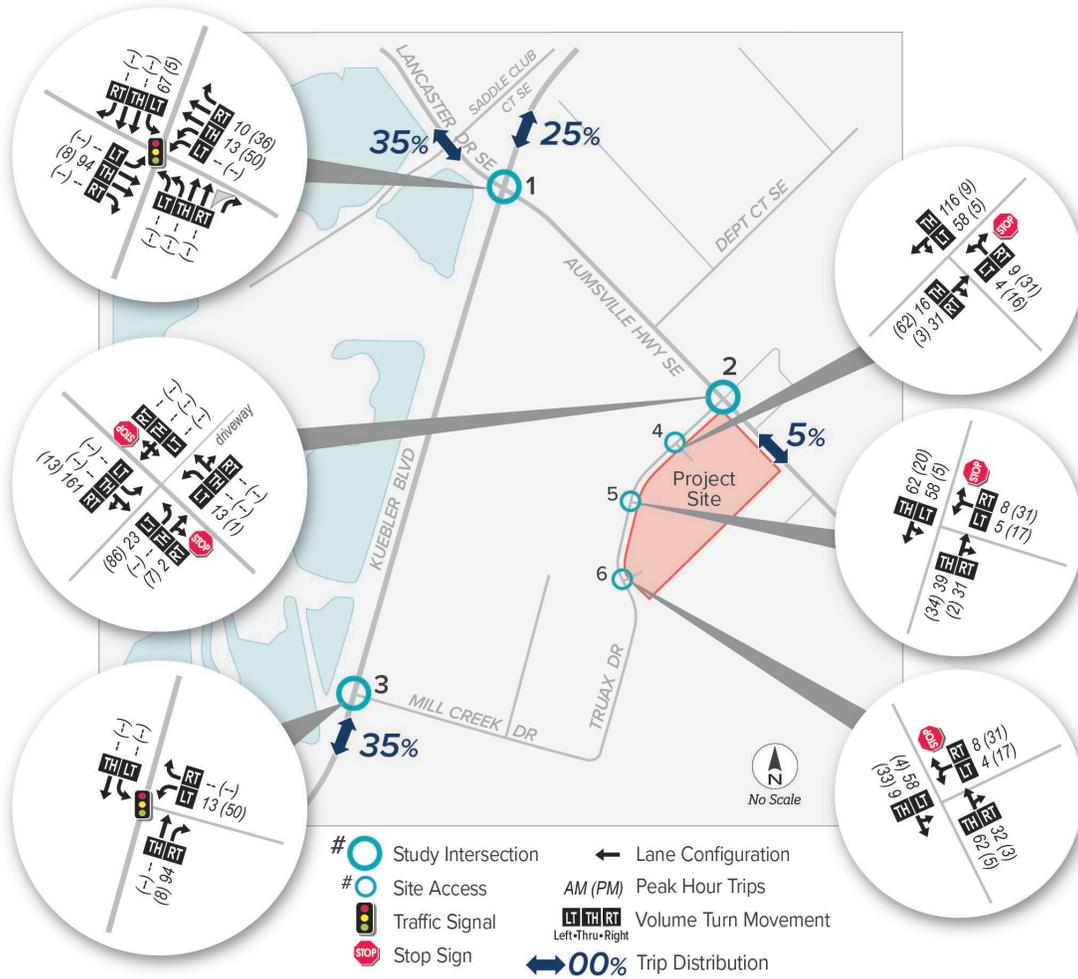

FIGURE 3: TRIP DISTRIBUTION AND PROJECT TRIPS

FUTURE TRAFFIC VOLUMES

The AM and PM peak hour traffic volumes for the two future analysis scenarios are shown in Figure 4 and Figure 5. The Future 2023 Background scenario volumes were created by growing the Existing 2021 volumes with a conservative 2% linear growth rate over the two years to assumed buildout and then adding the in-process development trips from the Saddle Club Street commercial development.⁷ These in-process trips are shown in the appendix. The Future 2024 Build scenario volumes were created by adding the project generation trips to the Future 2024 Background scenario volumes.

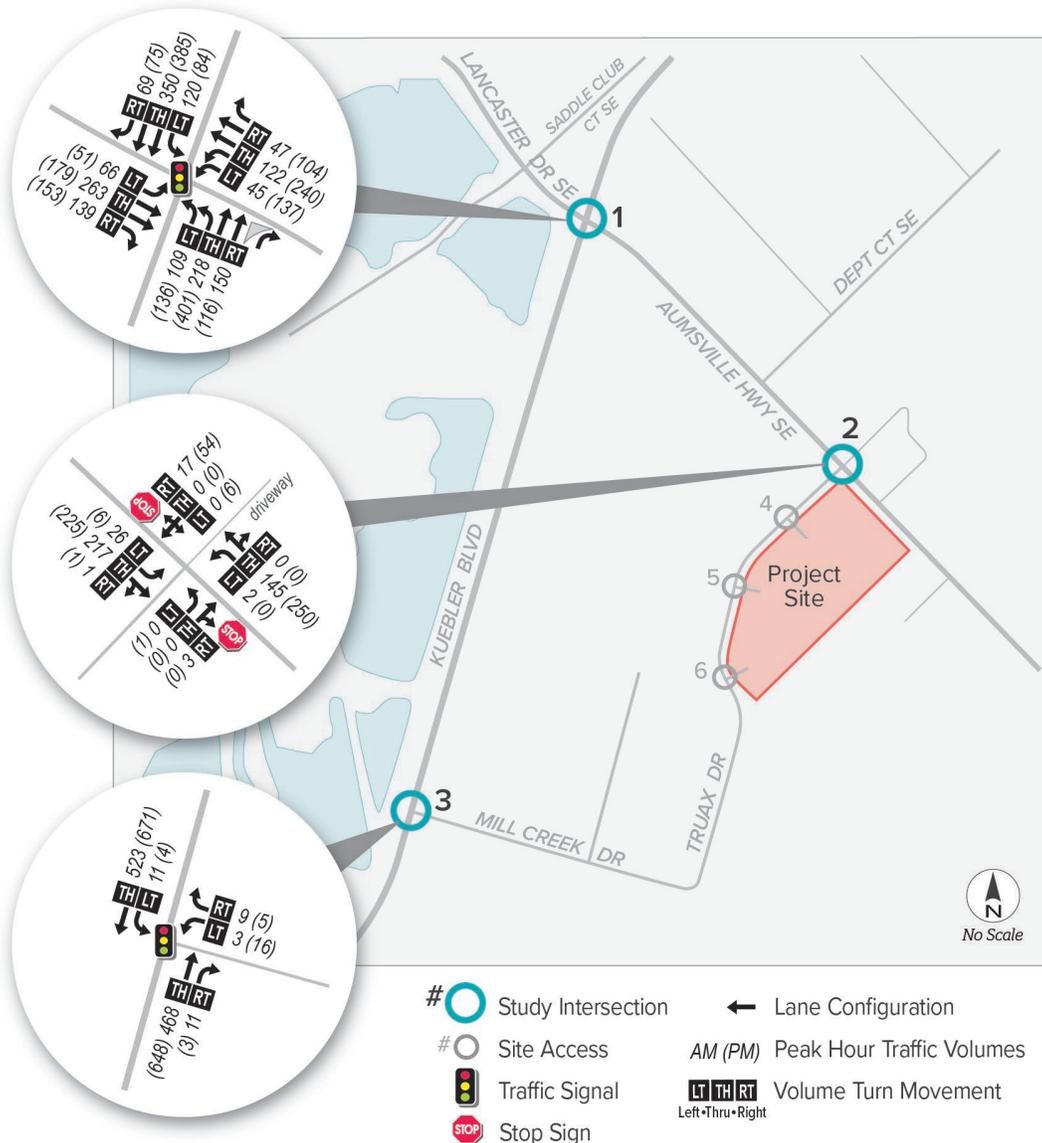

FIGURE 4: FUTURE BACKGROUND AM AND PM PEAK HOUR VOLUMES (2023)

⁷ Salem Saddle Club Street Development, DKS Associates, January 2021.

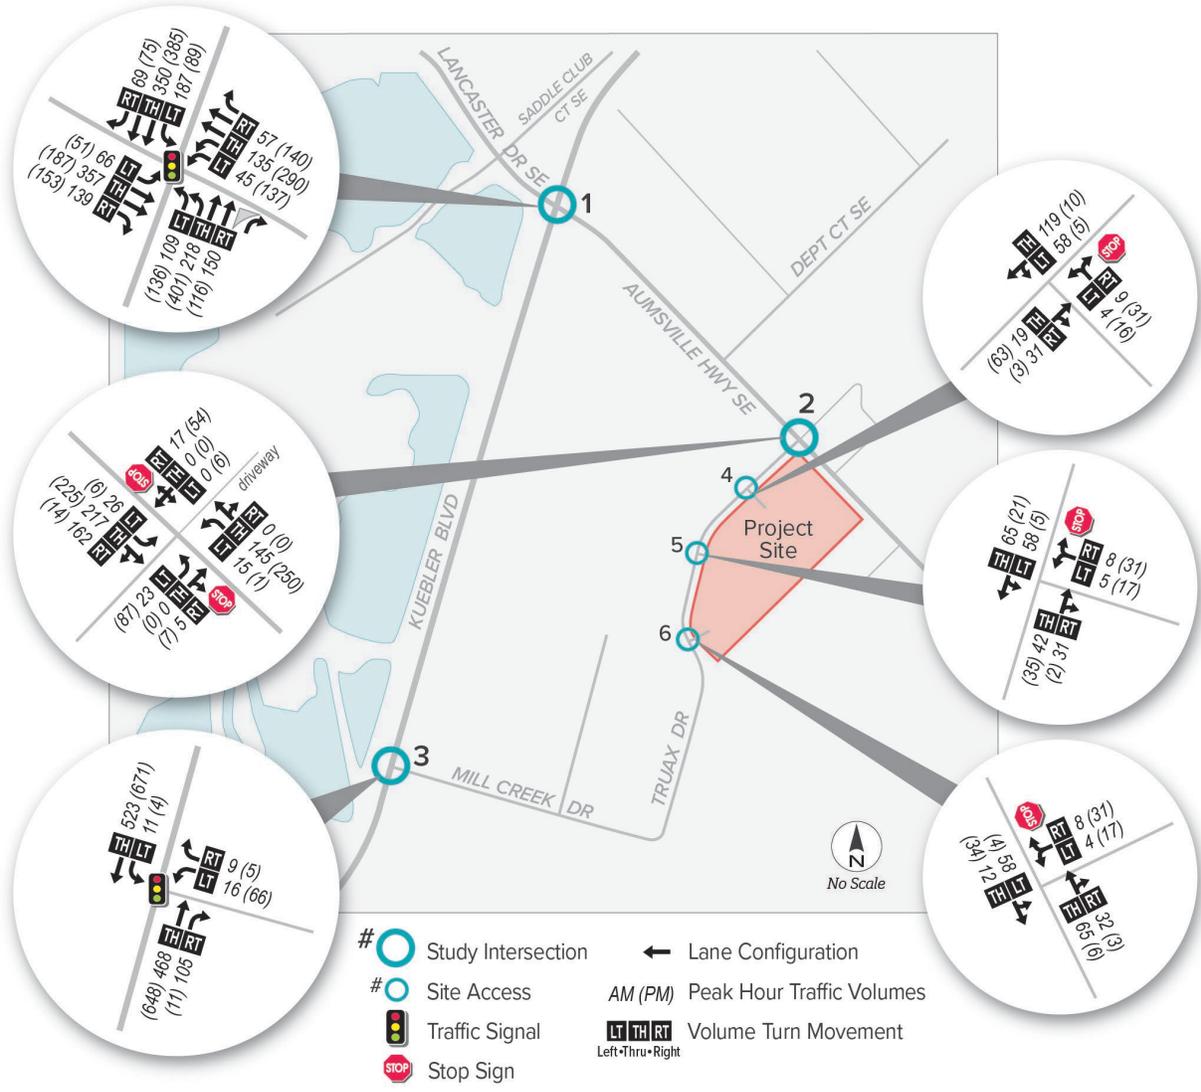

FIGURE 5: FUTURE BUILD AM AND PM PEAK HOUR VOLUMES (2023)

FUTURE INTERSECTION OPERATIONS

Future traffic operations at the study intersections were determined for the AM and PM peak hours based on the Highway Capacity Manual (HCM) 6th Edition methodology for signalized and unsignalized intersections.⁸ The results were then compared with the City of Salem’s minimum operating standards. Table 6 and Table 7 list the estimated v/c ratio, delay, and LOS of each study intersection. The HCM reports are provided in the appendix.

TABLE 6: FUTURE INTERSECTION OPERATIONS (2023) – AM PEAK

LOS = Total Level of Service

TWO-WAY STOP CONTROLLED INTERSECTION:

Delay = Critical Movement Approach Delay (secs)
v/c = Associated Movement Volume-to-Capacity Ratio
LOS = Level of Service (Major/Minor Road)

As shown, all study intersections meet the City’s operating standards for all future scenarios.

SITE PLAN EVALUATION

This section reviews the on-site circulation, access spacing, sight distance recommendations, and parking for the proposed development based on the provided site plan and the City of Salem's Revised Code.⁹ The proposed development will have four industrial buildings with three access points along Truax Drive. The site plan can be found in the appendix.

ACCESS POINTS & INTERNAL CIRCULATION

The site plan proposed three site driveways on Truax Drive. The northern and southern driveway have existing curb cuts today.

The site plan appears to show sufficient width of the drive aisles for the two-way traffic and sufficient intersection radii for passenger cars and trucks to make safe turning maneuvers. Crosswalks across all three site driveways are shown that connect the sidewalks on Truax Drive to the building entrances. And a pedestrian access is shown on Aumsville Highway approximately 400 feet south of the Truax Drive intersection.

ACCESS SPACING

All proposed access points are required to meet the City's required spacing between intersections and driveways. According to the City's code¹⁰, driveway approaches providing direct access to a local street shall be no less than 200 feet from the nearest minor or major arterial intersection, measured from centerline to centerline. Based on measurements on Truax Drive, all three proposed driveways meet the City's access spacing standard.

INTERSECTION SIGHT DISTANCE AT PROPOSED ACCESS POINTS

There are three proposed full-access driveways to the project site on Truax Drive. Based on the American Association of State Highway and Transportation Officials (AASHTO) *Policy on Geometric Design of Highways and Streets*, the necessary intersection sight distance (ISD) for left-turning passenger cars to make a safe turn is 335 feet and 420 feet is needed for trucks (based on a design speed of 30 mph).¹¹ Preliminary sight distance was evaluated along the property frontage on Truax Drive during a field visit.¹² See the appendix for figures showing the intersection sight distance triangles at the three driveways.

The northern, middle, and southern driveways all meet the passenger car (335 feet) and truck (420 feet) ISD looking left and right from the driveways. However, the sight distance triangle for

⁹ <https://www.cityofsalem.net/salem-revised-code>

¹⁰ Title X, Chapter 804.030(c), Salem Revised Code.

¹¹ Chapter 9.3, A Policy on Geometric Design of Highways and Streets, 7th Edition, AASHTO, 2018.

¹² Field visit conducted by DKS and Westech on December 17, 2021.

the middle and southern driveways will require coordination with the signage and landscaping to assure the necessary sight distance can be achieved.

As shown on the intersection sight distance figure in the appendix, the sight distance triangle looking to the left from the southern driveway includes a portion of the property on the west side of Truax Drive (opposite of the proposed development). However, this property is designated wetlands and therefore, no sight distance obstructions are expected to be placed on that property.

Because the sight distance measurements reported in this study are preliminary at all of the driveways, prior to occupancy, sight distance at all of the proposed access points will need to be verified, documented, and stamped by a registered professional Civil or Traffic Engineer licensed in the State of Oregon to assure that buildings, signs, electrical cabinets, light poles, or landscaping does not restrict sight distance.

PROJECT SUMMARY

A summary of the proposed industrial development in Salem, Oregon and its anticipated impacts are as follows:

TRIP GENERATION

- The development is estimated to generate 306 total (268 in, 38 out) AM peak hour trips, 165 total (22 in, 143 out) PM peak hour trips, and 1,807 daily trips.

INTERSECTION OPERATIONS

- All study intersections meet operating standards under Existing 2021, Future 2023 Background, and Future 2023 Build conditions. No capacity or other roadway improvements or mitigations are recommended.

SITE EVALUATION

- The site plan appears to show sufficient width of the drive aisles and internal intersections for safe vehicle maneuvers.
- Based on the proposed site plan, all three proposed driveways meet the City's access spacing standard.
- The northern, middle, and southern driveways all meet the passenger car and truck ISD looking left and right from the driveways. However, the sight distance triangle for the middle and southern driveways will require coordination with the signage and landscaping to assure the necessary sight distance can be achieved.
- At all of the proposed driveways, prior to occupancy, sight distance will need to be verified, documented, and stamped by a registered professional Civil or Traffic Engineer licensed in the State of Oregon to assure that buildings, signs, or landscaping does not restrict sight distance

APPENDIX F: SITE PLAN

ENLARGED SITE PLAN
SCALE: 1" = 50'-0"

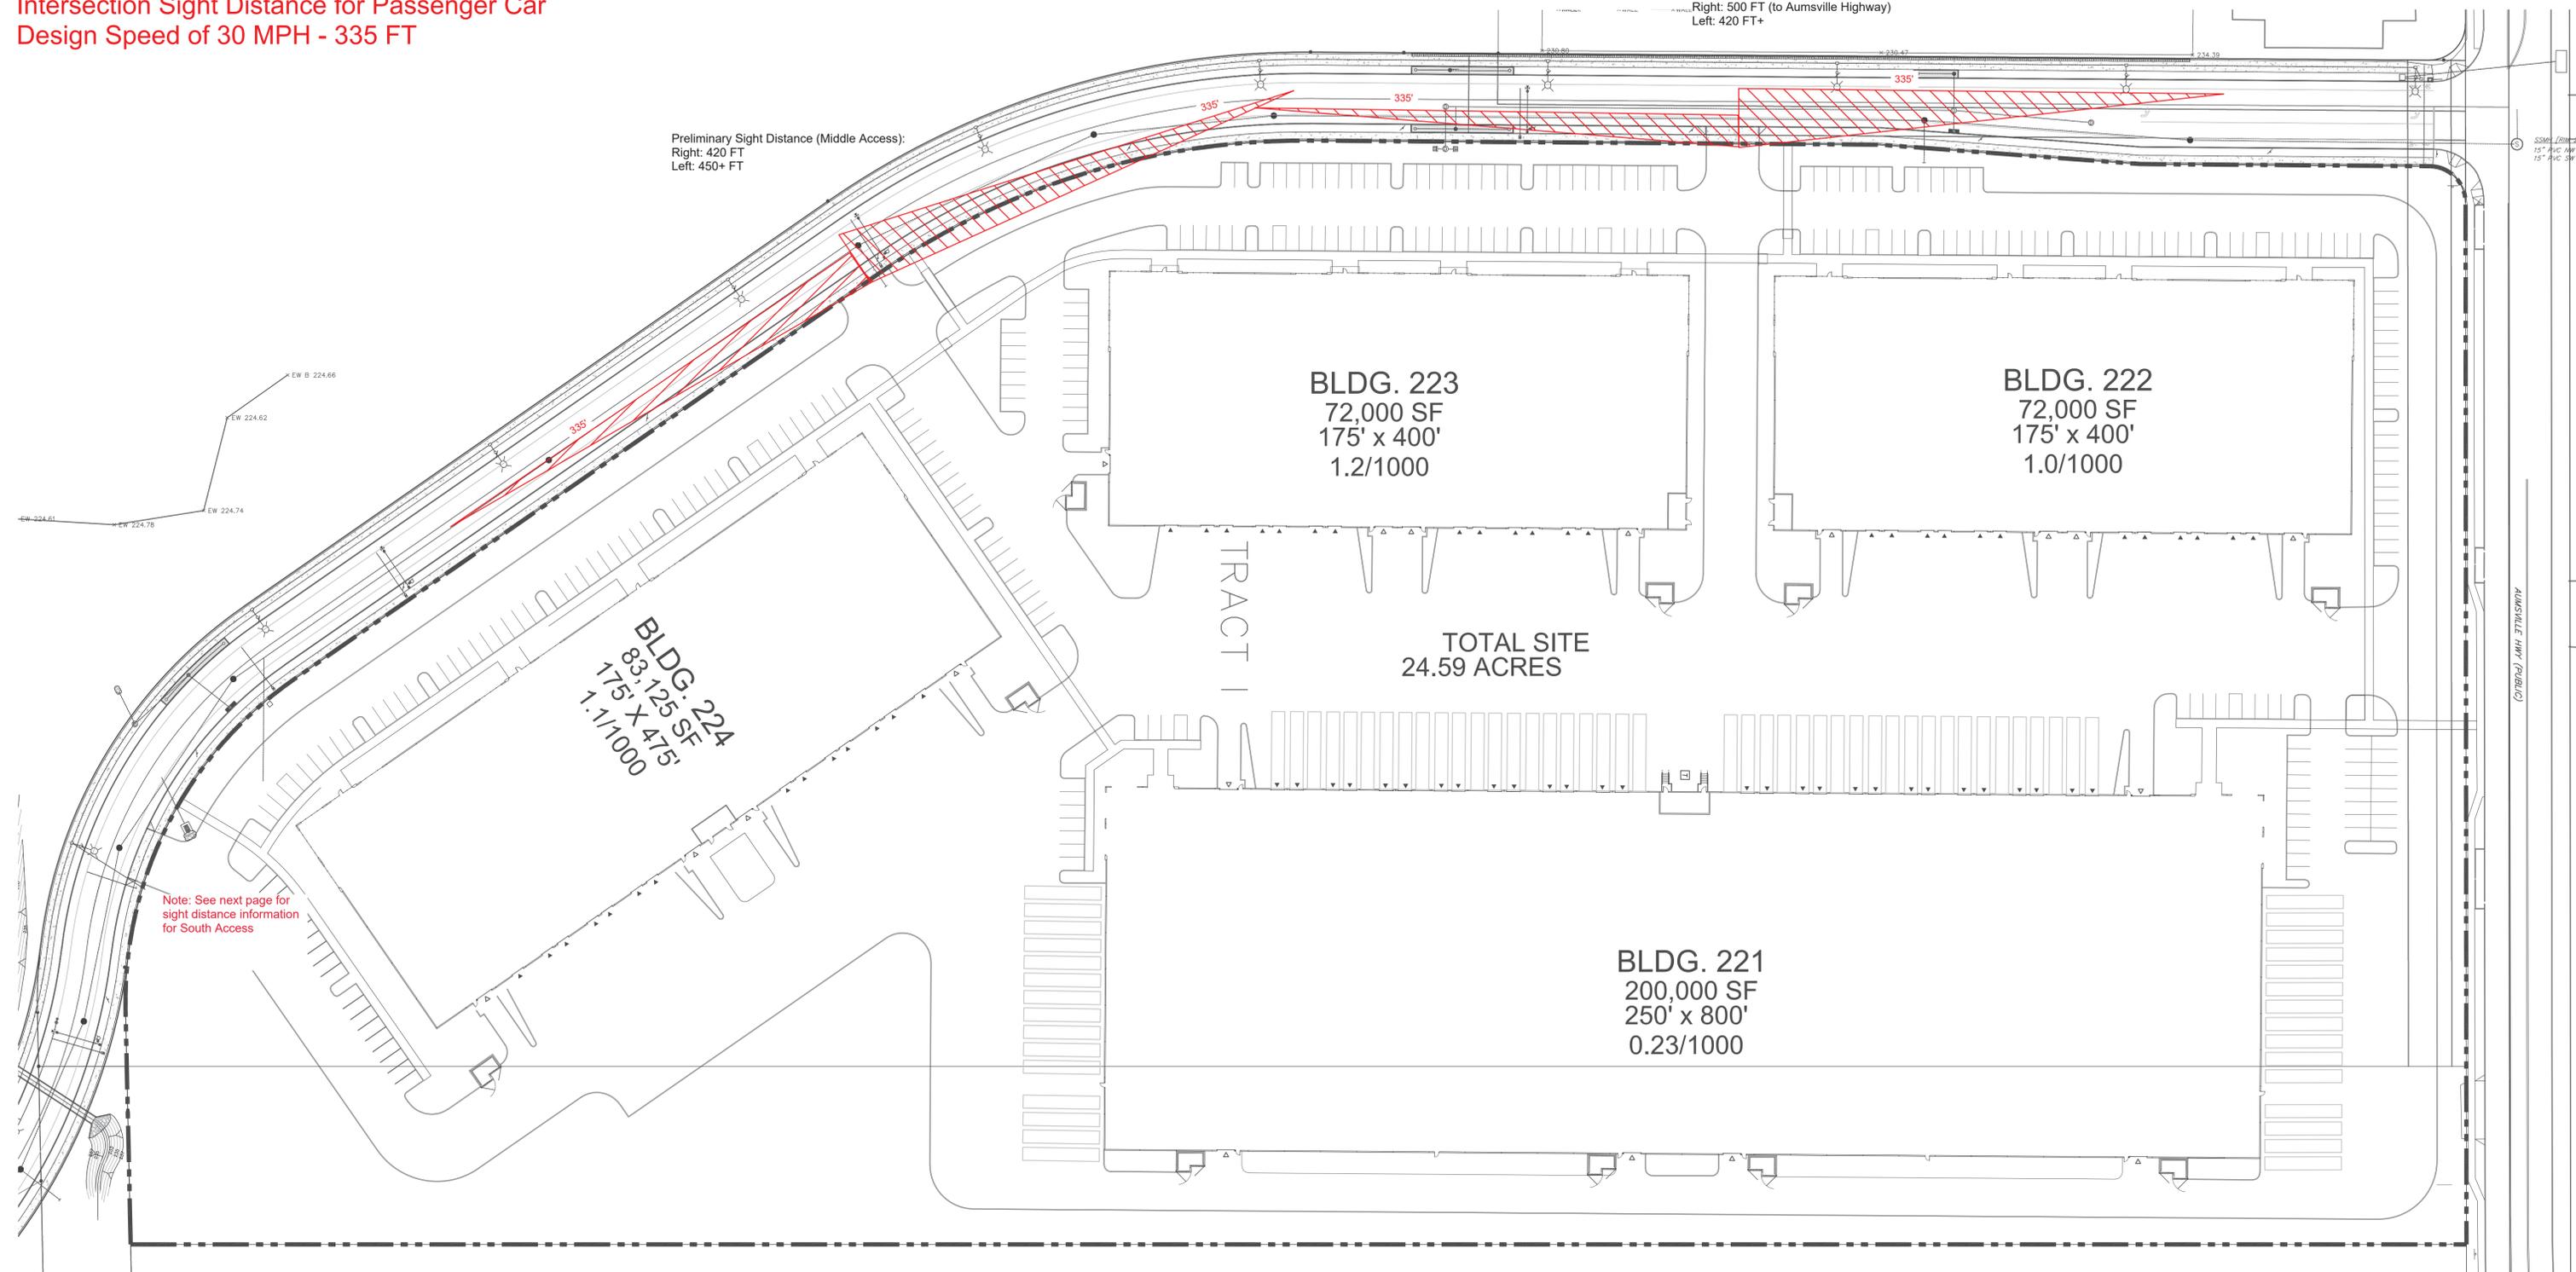

TOTAL SITE AREA:	1,070,926 SF (24.59 Acres)
TOTAL LANDSCAPE AREA:	219,803 SF
PERCENTAGE OF SITE:	20.5%
TOTAL HARDSCAPE AREA:	
SIDEWALK:	21,048 SF
PERCENTAGE OF SITE:	1.97%
PAVING:	404,445 SF
PERCENTAGE OF SITE:	37.77%
TOTAL BUILDING AREA:	422,750 SF
PERCENTAGE OF SITE:	39.5%

APPENDIX G: INTERSECTION SIGHT DISTANCE TRIANGLES

**Intersection Sight Distance for Passenger Car
Design Speed of 30 MPH - 335 FT**

Preliminary Sight Distance (North Access):
Right: 500 FT (to Aumsville Highway)
Left: 420 FT+

Preliminary Sight Distance (Middle Access):
Right: 420 FT
Left: 450+ FT

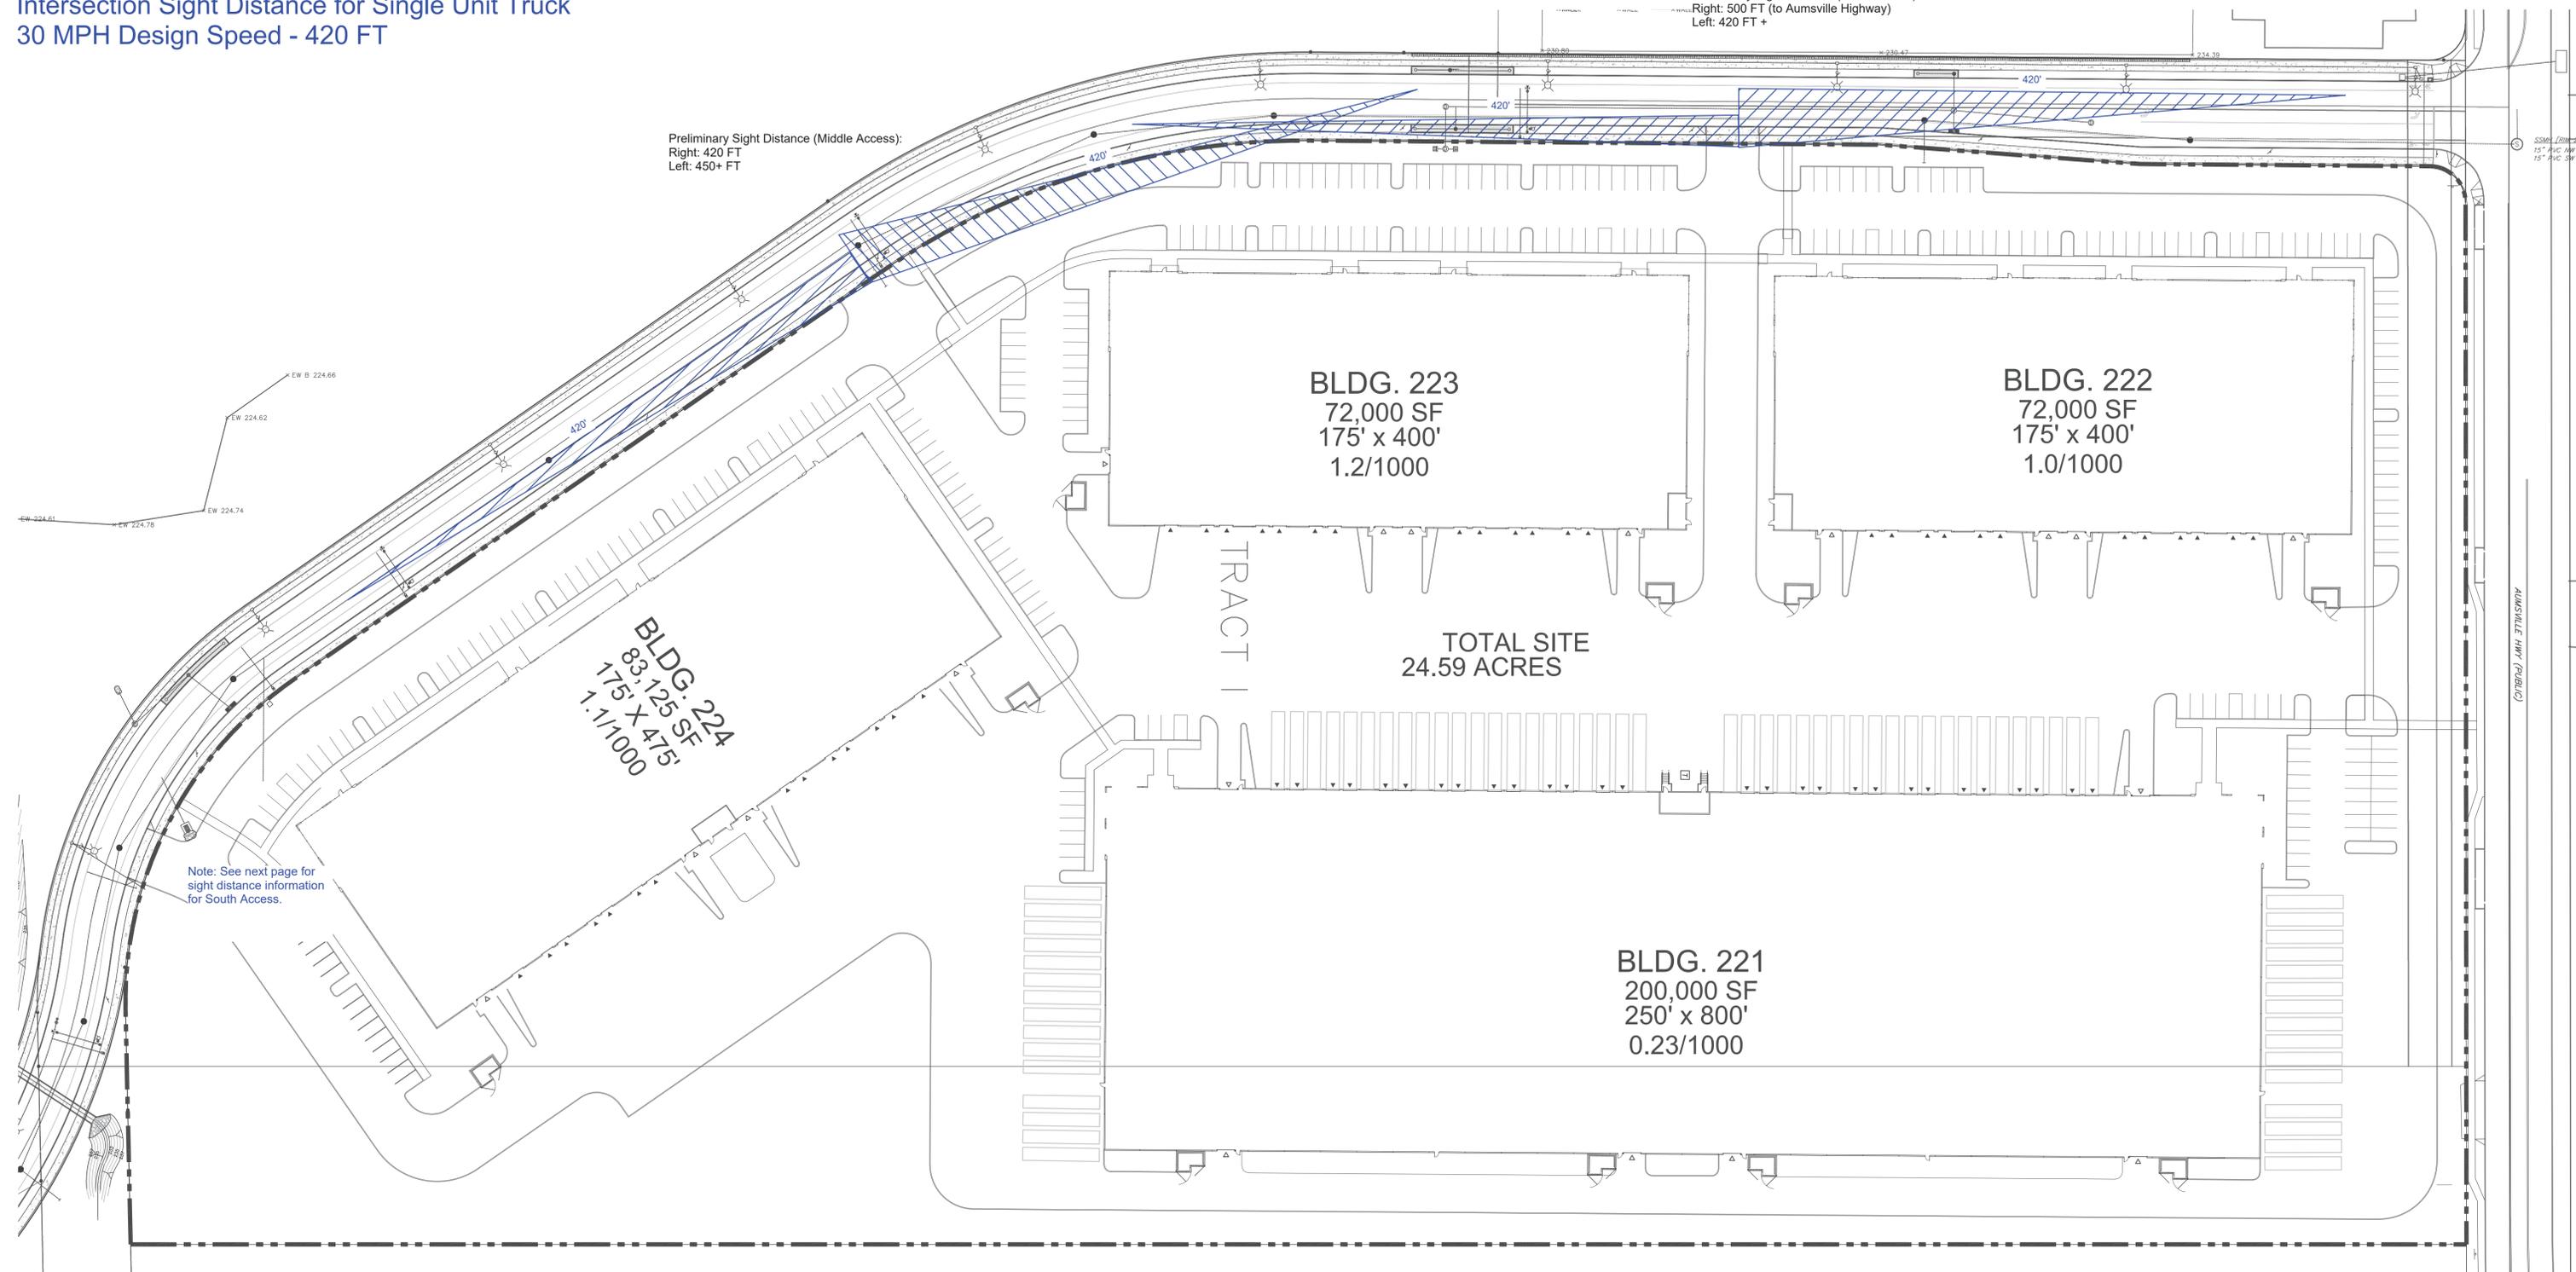

ENLARGED SITE PLAN
